

Building Skills for Resource Efficiency

International Synergies Limited offers a training course that builds the data collection and management skills necessary to identify strategic opportunities available through industrial symbiosis.

Who Benefits?

Organisations and their supply chains.

How Does it Work?

Experience suggests that landfill costs represent more than 10% of total waste management costs for many businesses. Our training course helps companies to manage their resources more productively, and to reduce costs, through a systematic approach to data collection. A full-day's training may be delivered at the client site or at International Synergies' training headquarters in Birmingham, UK.

The training covers:

- Standard approach to data collection;
- Sources of information within your company;
- Generating a process map;
- Prioritising your data;
- Completing a decision matrix for next steps;
- Printed work manual containing all audit templates and course material; and
- Post course follow up and support.

The course prepares you to:

- Implement the key initial stages of an Environmental Management System;
- Use industrial symbiosis to identify best value solutions for wasted resources;
- Support continuous professional development initiatives; and
- Assist in attaining and maintaining ISO14001.

"A very concise and informative course, delivered in an easily understandable manner"
Corporate Client, 2011
