

Information Seminar on Applied Industrial Symbiosis

International Synergies Limited offers an information seminar which is appropriate for those organisations wishing to better understand the strategic opportunities available through industrial symbiosis.

Who Benefits?

Public and private organisations, and industry groups.

How Does It Work?

Industrial symbiosis can play a fundamental role in helping organisations achieve Zero Waste targets, sustainability goals, and corporate social responsibility. International Synergies is recognised as a leading specialist in applied industrial symbiosis and has to date supported the implementation and development of projects, and provided expert input to governments, across five continents. The European Commission has incorporated industrial symbiosis as a key policy tool in its flagship programme, 'A Roadmap to a Resource Efficient Europe' based in part on the success of International Synergies' projects.

This information seminar can be customised to the client's requirements, addressing the organisations environmental and sustainability targets and policies. These may include:

- Industrial ecology and the circular economy;
- Industrial symbiosis and its relevance to your business;
- The benefits of industrial symbiosis;
- Policy initiatives enabling profitable industrial symbiosis; and
- Current industrial symbiosis activity.
